

To the EU Commission

Ladies & Gentlemen,

With this letter we turn to you once again in order to present to you our website, on which we point out political failures. Here you can find out about our opinion of your authority, to which we recently [posed some questions and received no answers](#) and with regard to [actions in connection with your authority](#).

We also request that you take note of the two attached letters, and that you state your opinion with regard to the bias of the highest judges to influence the law, and also with particular regard to the fact that none of these means have apparently contributed to putting a stop to the daily devaluation of the Euro.

This point in particular is of interest to us, because the President of the ECB has so far failed in his solution approaches and rescue attempts, even with the assistance of the German Chancellor (in the tradition of past German Chancellors), who is concealing the real reasons behind the debt crisis and maintains silence about the actual decline of the Euro. Lies qualify neither as a conservative nor a Christian preference. What is your opinion of this deception of the people?

In this connection we are also interested in the distinction of the ECB Council member Jörg Asmussen, who has recently been trying to negotiate advantages for Italy, in order to support its national budget, which is threatened by bankruptcy (supplier debt relief according to participation quotas)? Do you also see this as prohibited state financing, which abolishes the creditor protection of the people?

We should remember at this point Ex-Federal President [Christian Wulff](#), who at the same point as Mr. Asmussen, when he spoke out against this protection, advocated at the University Bocconi in Milan the protection of the interests of the peoples of Europe – for which he unjustly lost his office. But has it come to the point in Europe's administration where such acceptance of benefit remains without consequences, even though it can hardly be called lawful.
